ABOUT

A front-end developer with experience in HTML5, CSS3, & JavaScript. My background in Marketing, Customer Service, & Sales allows me to understand user needs & wants, so I can provide a great user experience on my apps & web pages. I am always in a learning mindset to better my skills and continue growth.

PROJECTS

Willow | HTML & SASS |

A multi-page personal website for Willow including an about page, blog and contact form. Different styling techniques are used to achieve a desirable look and media queries for responsiveness.

Juno Bingo | jQuery & SASS HTML |

A two player game where you have to match the numbers on your card to the numbers being called. This game uses multiple functions to generate random numbers for different parts of the game, along with different conditional loops.

Quick Flick Picker | React & Firebase & Axios |

A web app to help you decide which movie you should watch. I worked with setting up Firebase and accessing the API using Axios. By using multiple components and branches on GitHub we were able to collaborate and create this project.

EDUCATION

Immersive Web Development Certificate / Accelerated JavaScript / Web Dev 101

Juno College of Technology – Toronto, ON

May 2019 – March 2020
